

Apex Bank Report

Accessibility Risk Snapshot

This report represents a high-level snapshot, not a comprehensive accessibility audit. Findings are indicative and intended to highlight patterns and risk areas rather than provide exhaustive coverage.

This is not a full Web Accessibility audit.

Executive Summary

A high-level accessibility review of the Apex Bank website identified systemic accessibility barriers affecting keyboard users, screen reader users, and customers with low vision. Based on automated scanning combined with targeted manual checks, our findings indicate multiple high-risk WCAG 2.2 Level A and AA issues, including failures that commonly appear in ADA demand letters against financial institutions.

These issues impact core customer journeys, including site navigation, language selection, and account-related pages.

Key Metrics: Home Page

21

Unique accessibility issues identified via automated scanning

7

Critical impact issues

5

High impact issues

AIM Accessibility Score: 4.7 / 10.

No public Accessibility Statement or WCAG conformance documentation found.

These results suggest that accessibility issues are structural and component-level, rather than isolated content errors and would require in-depth remediation.
